

NEXUS AI

The AI Marketing Operating System

🔗 Brand Brain Intelligence

🔗 5 Specialized AI Agents

🔗 End-to-End Campaign OS

"Not just an AI generator — your complete AI marketing department."

The Marketing Problem

Why businesses fail to grow consistently — and what's missing

No Time for Strategy

Business owners spend hours creating content without a plan. Marketing is reactive, not strategic — and results show it.

High Agency Costs

A quality marketing agency costs \$3,000–\$15,000/month. Most SMBs simply can't afford consistent professional support.

Tool Fragmentation

Teams juggle 6–12 disconnected tools: Canva, ChatGPT, Buffer, Google Analytics... no unified workflow, no brand memory.

No Brand Memory

Without a centralized brand intelligence layer, every piece of content sounds different. Recognition and trust never compound.

What Is NEXUS AI?

An AI-powered Marketing OS — not a tool, a system that thinks for your business

Your AI Marketing Department

NEXUS AI replaces the entire marketing stack:

🔍 Marketing Strategist

✍️ Content Writer

⚙️ Campaign Manager

🎨 Creative Director

Quality Reviewer

AI Brand Memory

Learns your brand, voice, audience, and campaign history over time

Full Campaign Automation

Strategy → content → publishing in one connected workflow

Multi-Platform Output

Facebook, Instagram, TikTok, LinkedIn — platform-native content

Outcome-Driven Design

Every feature exists to drive leads, conversions, and retention

How NEXUS AI Works

An intelligent 5-step loop — from brand setup to published content

🔗 Every published result is fed back into Brand Brain — the platform gets smarter with every campaign.

Brand Brain™ — The Intelligence Core

The AI memory layer that gives NEXUS AI its strategic moat

Persistent Brand Memory

Brand Brain is the intelligence layer that makes NEXUS AI different from every other AI tool.

It learns and remembers:

- Your brand voice, tone, and style
- Target audience profiles and pain points
- Competitor landscape and positioning
- Past campaign performance and learnings
- Winning hooks, CTAs, and content angles
- Uploaded media assets and visual style

Brand Voice

Tone, style, writing rules, words to avoid, personality

Target Audience

Segments, pain points, desires, demographics, behaviors

Competitors

Competitor names, differentiation angles, market gaps

Pricing & Offer

Price point, USP, primary offer, value proposition

Past Learnings

What worked, what failed, best-performing hooks & CTAs

Media Assets

Uploaded images, videos, brand colors, visual context

⚡ Switching cost: users can't leave without losing all brand intelligence — high retention by design

The 5 AI Agents

Specialized intelligence — each agent masters a different marketing discipline

Strategist

Chief Strategy Officer

Diagnoses market position, defines objectives, builds precise audience segments, maps the full funnel, creates 4-week execution calendar and asset readiness checklist.

NEX

Content Director

Writes scripts, captions, hooks, CTAs, and ad copy. Adapts tone, format, and length for each platform and audience segment. Powers the Content Hub.

PULSE

Campaign Orchestrator

Coordinates all agents, manages the full campaign workflow, ensures every output is connected and brand-consistent across all deliverables.

Visual Director

Creative Lead

Generates image prompts, creates detailed creative briefs, analyzes uploaded media assets for brand alignment, and guides visual execution.

Sentinel

Quality Gate

AI quality and risk reviewer. Checks every campaign for brand safety, logical errors, strategic coherence, and platform compliance before any launch.

Platform Feature Set

A complete AI marketing operation — strategy to publish in one system

Brand Brain

Persistent AI brand memory — learns from every campaign

Campaign Wizard

Guided 6-step flow: brief → strategy → content → approval

AI Strategy Engine

Full strategy: funnel, audience segments, content angles, calendar

Content Hub

All post drafts, captions, image prompts, status tracking

Image Generation

DALL-E 3 + fal.ai Flux — AI images for every platform post

Content Calendar

Visual calendar view of all scheduled and published posts

Paid Campaign Pack

Audience targeting, copy variants, budget guides, ad setup

Social Publishing

One-click publish to Facebook, Instagram, TikTok, LinkedIn

Sentinel Review

AI QA gate — brand safety, risk scoring, strategic coherence

Pricing Plans

Credit-based SaaS — pay for what you use, scale as you grow

- ✓ Multiple workspaces
- ✓ Advanced analytics
- ✓ White-label ready

Business Model & Revenue Margins

High-margin SaaS: AI API costs are tiny vs. subscription revenue

? Revenue Model

Monthly SaaS subscriptions at 4 tiers.

Free → \$19 → \$49 → \$99 per month

? Credit Economics

Each plan includes a monthly credit bundle. Credits are spent on AI actions. OpenAI + fal.ai API costs are \$0.001–\$0.053 per action, while users spend 1–8 credits. At \$49/month (150 credits), margins range from 87% to 99%.

? Retention Moat

Brand Brain accumulates brand intelligence over time. Users cannot replicate this history elsewhere — creating strong lock-in and compounding retention.

AI Action Margin Analysis

AI Action	Credits	API Cost	Margin
Campaign Generation	5	\$0.028	94%
Full Strategy (All Agents)	8	\$0.053	93%
Image Generation (DALL-E)	3	\$0.040	87%
Content Plan	2	\$0.002	99%
Sentinel Review	2	\$0.001	99%
Ad Copy (VEX)	2	\$0.001	99%
Chat Message	1	\$0.0003	99%
Website Scan	3	\$0.040	93%
Paid Campaign Pack	6	\$0.060	90%

Third-Party Services & Integrations

Every external platform powering the NEXUS AI stack

Supabase

Database + Auth

PostgreSQL DB, Supabase Auth, session management, row-level security

OpenAI

Core AI Engine

GPT-4o for strategy & copy, GPT-4o-mini for fast ops, DALL-E 3 for images

fal.ai

Image Generation

Flux Pro/Schnell image models — premium AI image alternative

Cloudinary

Media Storage & CDN

Signed uploads, media CDN, asset workspace isolation, audit logs

Stripe

Subscriptions & Billing

Subscription plans, plan upgrades, webhook events, credit sync

Meta API

Facebook / Instagram

Publish posts and stories to FB Pages + Instagram Business

TikTok API

TikTok Publishing

Direct publishing to TikTok Business accounts via official Content API

LinkedIn API

LinkedIn Publishing

Publish to LinkedIn Company Pages and personal profiles

Replicate

AI Model Access

Stable Diffusion and alternative open-source AI models

Resend

Transactional Email

Welcome, password reset, credits-low alerts, campaign notifications

Sentry

Error Monitoring

Real-time error tracking, performance monitoring, production alerts

Redis/Upstash

Cache + Rate Limiting

Per-user API rate limits, session caching, queue management

API Keys & Environment Variables

Complete list of credentials required to deploy and run NEXUS AI

Technology Stack

Built lean and production-ready — scales from MVP to enterprise without rebuilding

Frontend	Next.js 14 (App Router) · TypeScript · Tailwind CSS · Framer Motion · React Context API
Backend / API	Next.js API Routes · Prisma ORM · JWT Auth · Supabase Auth · Edge Middleware · Rate Limiting
Database	PostgreSQL via Supabase · Prisma Schema · Row-Level Security · Audit Logging · Atomic credit deduction
AI Engine	GPT-4o (strategy + copy) · GPT-4o-mini (fast ops) · DALL-E 3 (images) · fal.ai Flux · Replicate
Media	Cloudinary (signed uploads + CDN) · Upload sessions · Workspace isolation · Asset audit logs
Payments	Stripe Subscriptions · Webhook events · Credit system synced to plan tier · Atomic deduction locks
Infra / Ops	Vercel Edge Deployment · Redis/Upstash (rate limit + cache) · Sentry (monitoring) · Resend (email)
📌 Infrastructure cost at launch: ~\$50–\$200/month (Supabase free tier + Vercel hobby + Cloudinary free) — extremely lean burn rate until significant scale	

Security & Infrastructure

Enterprise-grade security architecture from day one

Authentication

Supabase Auth + JWT tokens. All API routes require valid Authorization headers. Secure session management with refresh token rotation.

Media Security

All uploads use Cloudinary signed URLs. Upload sessions are tracked with full audit logs. Workspace isolation prevents any cross-user data access.

Rate Limiting

Redis-backed per-user rate limits on all AI endpoints. Prevents API abuse and controls OpenAI cost spikes in production.

Credit Guards

Atomic credit deduction via PostgreSQL's updateMany with conditional WHERE clause. Race conditions prevented — concurrent requests cannot double-spend credits.

Error Monitoring

Sentry integration tracks all production errors in real-time. Performance traces on critical paths: AI generation, uploads, and billing workflows.

Edge Deployment

Deployed on Vercel Edge Network. Global CDN for static assets. Zero-downtime deployments. Auto-scaling under load. Environment variable management via Vercel.

Growth Roadmap

Three phases from lean MVP to enterprise marketing platform

Phase 1LIVE NOW	Phase 2Q3 2026	Phase 3Q4 2026
Lean SaaS MVP	Scale & Automation	Enterprise Platform
- Brand Brain + campaign engine 5 AI agents (strategy + content) - Content Hub + post management - Stripe billing + credit system - Facebook / Instagram publishing - Cloudinary media management	- TikTok + LinkedIn full publish - Video script template system - A/B testing for campaigns - Performance analytics dashboard - Campaign cloning + templates - Team collaboration features	- AI video generation (media assembly) - Agency white-label mode - Custom AI model fine-tuning - Advanced attribution tracking - Webhook + API access for devs - Multi-brand workspace management

Architecture is designed to scale to Phase 3 without a rebuild — the lean foundation supports future enterprise features.
